

Instructions for Eddy Current Playback (ECPB)

The CD contains a new version of the EC14 program that you must use to save data files in a revised format that can be read by the ECPB program.

Copy the file from the CD directory EC14 named EC313C.tst to your C:\EC14 directory.

Then right click on the EC14 icon that you use to start the EC14 program, and left click on properties. Select the Shortcut tab and change the target to:
C:\EC14\TPRUN.EXE EC313c.tst

If you run into any problems with the new version, you can always change the target back to the version you are currently using, so make a note of that version prior to making any changes.

To install the playback program, either double click on the setup program found in the CD directory ECPB, or you can use the Windows Start/Run and Browse. to find and run the Setup.exe program.

The program will need to install in the default directory of C:\ECPB

It will also create a subdirectory c:\ECPB\data for a default data file directory for playback. I included one file that you can playback as a sample.

It will also create a subdirectory c:\ECPB\images for a default directory for storing any images you want to save after performing a playback. At this point there is not a way to create a new image directory, but I will add that later.

After the program installs it may tell you to restart the computer, but this is not necessary as no drivers are installed.

To launch the program use the Windows Start/AllPrograms, and the ECPB icon will be grouped under the EC14 group along with the EC14 icon (if EC14 has already been installed on the computer).

After launching the program, a status window will display 'Load file to Playback'. Click on the 'Open File' button to select a file to playback. Initially use the sample file included in the data folder. (Z1R2T13.DAT). The status will display 'Playback Ready'. Click on the Play button to begin the playback, and click on the Pause/Play button to pause and then resume playback.

The Playback Speed setting is computer dependant, and I can speed it up a bit if needed. The other settings function like the EC14 program for adjusting gain/phase etcetera.
