EC14 CHARTS

Version 316K

4-27-2012

Remove Phase Wand 2 from the plots (still being calculated) and reduced the vector length to 5 as the previous value of
Not sure. Version 316J is the version that a problem was noticed. At this point the offset and compression cannot be acco

Version 316

3-22-2012

- 1) Task_SaveSettings object modified to accurately display status info and also delete redundant action list from file object
- 2) Reduce MessageDelay from 2 sec to 1 sec in action list SaveData to speed up autorecord process.
- 3) Many changes to Task_Adjust to correctly scale offset of data and Phase Wand for x axis compression, Phase Wand v
- 4) Course Balance modified so that A/D range is no longer visible, and gain range is fixed at +/-5 so that signal clipping is
- 5) Tasks for continuous erase and block erase were combined into a single task named TaskXY_Dot.
- 6) Checkbox 2-Ch was added to the strip chart to allow Task_Adjust to display just the two vertical (Y) channels.
- 7) Identifying labels for the stripcharts were change from X and Y to H & V.

Version 315

8-28-2011

- 1) Main addition was the ability to record data using either a footswitch or using auto-record which recognizes the end of

12-28-2008

Version 313

- 1) 'Save and Quit' task list now calls DLL FlashLED to check for USB communications, and if error then don't save last.c
- 2) Put the 'Save Data' button back.

12-20-2008

Version 312

- 1) Resize XY charts to be square and maximize size for 1280 x 800 wide screen display.
- 2) Make stripchart channel identifying text white.
- 3) Make all gain and phase and axis compression controls available from the 1XY display mode (Big XY chart).
- 4) Add Tubelist Index slider to allow quick indexing through the tube list.
- 5) Change Display Mode from drop down to buttons for quicker selection of display mode.
- 6) Made Clip Data sticky so that data is always clipped at the completion of a stripchart if the box is selected. Unselecting
- 7) Remove TaskAdjust flag from LoadConfigurations action list and Charts action list so that TaskAdjust does not run un
- 8) Rename 'Exit' to 'Save and Quit'.
- 9) Add 'Quit' to allow user to exit program without saving settings and corrupting the last.cfg file in the event that the USB
- 10) Modify initializing routine so that the program defaults to 12kHz/3kHz differential/cross-axial when no last.cfg file is fo

6-6-2008

VERSION 311

Changes that affect this release include:

- 1) Ch1-XY axis scale compression object X1 compressed the Y scale instead of the X scale. This has been corrected
- 2) The X axis scale compression no longer changes the X axis range of the XY plots while in the 2XY-1SC chart mo compression setting. The range will always be from -5 to +5. This is consistent with the 1XY chart mode.
- 3) The strip chart's y scale was changed to give each channel in the strip chart a range of -5 to +5. Since there are now -20 to +20.
- 4) The 'Clip Data' object was added to the strip chart to keep data from one channel from overlapping adjacent chan Click it a second time to restore the full range of the data.
- 5) The 'Balance' object is now enabled while running in the 1XY chart mode (except when in the fixed-time erase mo stream to re-balance.
- 6) A new window has been added to select color preferences for the 2XY-1SC chart mode. The panel is accessed u The 'Grids' object in this window is used for all charts in the 2XY-1SC mode, and in the 1XY mode. The '1XY Setup' is st preferences for the 1XY chart mode, and for the 1XY chart auto-erase preferences.
- 7) A new file, c:\ec14\mycolors.cfg, will be created the first time you exit the new version of the program. This file is

used for colors, and auto-erase. Since the file does not exist the first time you run the program, you will receive a short message found during program initialization. However, the next time you start the program, you will see a message 'Loading Color

1-13-2008

VERSION 310

Disabled all controls except for STOP when the RUN control is actuated.

Make leading dot visible for Bulk Erase mode when time is 5 or less.

Change order of Strip Chart signals top to bottom Ch1-Y, Ch1-X, Ch2-Y, Ch2-X.

Allow Task Initialize to run in the event that last.cfg and ect.lst files do not exist.

1-09-2008

version 309

Changed ch1 back to x and ch0 to y. This is the only way to make x lead y in mathematical phase.

Also changed the math object calculations F1 Radians and F2 Radians (360-deg) where deg= the Phase slider object.

Calculate F1 Radians and F2 Radians on loading of .cfg file.

Changed Phase Wand so that it rotates clockwise.

Version 3.02

Convert BigXY to USB1408

Version 3.01

Convert SPI to USB1408 (was still using LJU12 with the synch function for SPI)

Version 3.00

Convert stripcharting to USB1408

Version 2.00

Convert to LabJack U3

Startup button now does both the OpenLabJack, and configures streaming.

Strip chart legend

Version 1.05 a-i

Continued tweaking things but still using the U12

Flying dot on Big X-Y

phase wand

one soft gain control for both x and y gains

Version 1.05

Added the second channel frequency and gain adjustments.

SPI CS values are:

CS=0 -> FREQ 1 QUAD PHASE AD9833

CS=1 -> FREQ 1 IN-PHASE AD9833

CS=2 -> FREQ 2 IN-PHASE AD9833

CS=3 -> FREQ 2 QUAD PHASE AD9833

CS=4 -> FREQ 2 GAIN LTC6912

CS=5 -> FREQ 1 GAIN LTC6912

Version 1.04

Modified main screen to display one strip chart and 2 XY charts.

Version 1.03

Added Big XY chart and experimented with number of points per read and number of data points old and new.

Eventually the LabJack backlog stops the run if too many points are displayed, or too few of samples are aquired per read

- 2) Call Set Window Size with EC14 Setup,3
- 3) Push Initialize

Settings for Pushbutton object "Startup":

Visible: 0
Enabled: 0
Exec. actions at initialize: 1
BG Color: Black

Balance

(\EC14 CHARTS\Balance)

This object is used to calculate a new 'avg' which is used to center the strip chart. If the balance has drifted out of the normal range, a card adjust loop runs.

Foot switch input is NOT used by this loop, so task 'foot' continues to run while this action list executes.

1) Balance acquires 100 samples and computes the average value. If the average is out of the range of 1 to 3 volts, then the hall voltage is displayed in 'Card Adjust' and the 'Done' button is made visible. The task enters a loop, 'a/d loop', which samples and displays the hall voltage in real time to allow adjustment. The loop terminates when 'Done' is pressed.

When 'Adjust complete' is pressed, the 'card adjust' and 'calibration complete' objects are made non-visible, and the instructions display 'press balance' and the task list ends.

If the probe is balanced within range, the instructions display to 'press switch - pull probe', and the task list ends.

Action list for Pushbutton object "Balance":

1)	-----	-----	"If 'Stop Task' is false, then a task is running while Balance was Pushed"

task SaveSettings

(\EC14 CHARTS\task SaveSettings)

This action performs a global exit from the application. The action list executes from the button 'Exit'. This gives a more polished ending to the runtime than just closing the window.

It also saves the defect list to a new file name.

Action list for Task object "task SaveSettings":

- | | | |

 Timeout (for terminate actions):: 5

TaskSC

(\EC14 CHARTS\TaskSC)

This is the main application loop. It doesn't multitask except when the 'Balance' button is pressed when in the 'Test' mode.

The task can be started by the mode switch 'Test Mode' or by task 'trim'. If the mode switch is in 'calibrate', then the task ends when a calibration tube has been pulled. The task also ends if the hall balance voltage needs to be adjusted while in the 'calibrate' mode.

If in the 'Test' mode, the task ends when the mode is changed to 'Calibrate' or the application is closed.

TaskXY_FixedNoDot

(\EC14 CHARTS\TaskXY_FixedNoDot)

This is the main application loop. It doesn't multitask except when the 'Balance' button is pressed when in the 'Test' mode.

The task can be started by the mode switch 'Test Mode' or by task 'trim'. If the mode switch is in 'calibrate', then the task ends when a calibration tube has been pulled. The task also ends if the hall balance voltage needs to be adjusted while in the 'calibrate' mode.

If in the 'Test' mode, the task ends when the mode is changed to 'Calibrate' or the application is closed.

**Record**

(\EC14 CHARTS\Record)

Auto Recording is used to detect if the probe is in free space by doing the following

- 1) The user is instructed to balance the probe in free-air
- 2) The Balance action-list was modified to check a flag named AR_First_Flag that if set will save the balance values to F
- 3) Then the streaming routine TaskXY_Block_Dot was modified to create a list of the first value of each new data vector,
- 4) TaskXY_Block_Dot was also modified to append all data to container A/D data list.
- 5) If Range is true then the Stop button is pushed, Next is pushed, and then Start is pushed.

Action list for Selector object "Record":

- 1) If/Then x=y with x=Record y=1
- 2) Set Status - Strip Chart to "Position Probe in Free Space - Press Balance"
- 3) Store in AR_First_Flag from 1
- 4) End If x=y

MSExcel MFL Defect List

(\EC14 CHARTS\Defect List\MSExcel MFL Defect List)

Use of this object accesses two files; a template file used to enter data into, and a data file that is saved on program exit.

The Template file is C:\MFL 1.55\DEFECT TEMPLATE, which is a data entry object in window 'Setup'.

The Data file is calculated based upon the entry for Job Name in window 'Setup'. Data is saved to this file upon the execution of Task Exit. The file name is dir&"\"&JobName.

**GainByteVector**

(\EC14 CHARTS\EC14 Setup\Gains & SPI\GainByteVector)

Settings for Math object "GainByteVector":

Formula: vector(A + (16 * B))

**n-1**

(\EC14 CHARTS\EC14 Setup\Gains & SPI\n-1)

Settings for Math object "n-1":

Formula: n-1

**vector modify**

(\EC14 CHARTS\EC14 Setup\Gains & SPI\vector modify)

Settings for Math object "vector modify":

Formula: vectorReplace(vector,i,value)

**BitVector**

(\EC14 CHARTS\EC14 Setup\Gains & SPI\BitVector)

This object takes a byte, and creates a bit vector with the MSB as item 0.
 ramp creates the vector of 1s
 pow2 modifies the vector into a vector of 1,2,4,8,16,32,64,128
 x is the byte to be bit wise anded with the above vector
 sgn produces a 1 for a positive value
 reverse puts the msb first so that the bit vector can be output msb first

Settings for Math object "BitVector":

Formula: reverse(sgn(x and (pow2(ramp(n))))))

**BitValue**

(\EC14 CHARTS\EC14 Setup\Gains & SPI\BitValue)

Settings for Math object "BitValue":

Formula: index(vect,i)

**DAC MSB**

(\EC14 CHARTS\EC14 Setup\Gains & SPI\DAC MSB)

Settings for Math object "DAC MSB":

Formula: Address*64 + INT(y/256)

Frequency

(\EC14 CHARTS\EC14 Setup\Frequency)

The screenshot shows a panel titled "Frequency" with a light gray background. It contains two input fields and two buttons. The first input field is labeled "Freq Ch 1 Differential" and is empty. The second input field is labeled "Freq Ch 2 Crossaxis/Absolute" and is also empty. To the right of the first input field is a button labeled "Set Frequencies". To the right of the second input field is a button labeled "Cancel".

Objects in panel "Frequency":

Formula: "Z"&zone&"R"&row&"T"&tube

**data file name**

(\EC14 CHARTS\Math\data file name)

Settings for Math object "data file name":

Formula: dir&"\"&"Z"&zone&"R"&row&"T"&tube&".dat"

**x-1**

(\EC14 CHARTS\Math\x-1)

Settings for Math object "x-1":

Formula: x-1

**Vector of Zeros**

(\EC14 CHARTS\Math\Vector of Zeros)

Settings for Math object "Vector of Zeros":

Formula: zero(x)

**Select Vector from list**

(\EC14 CHARTS\Math>Select Vector from list)

Settings for Math object "Select Vector from list":

Formula: select(list,column)

**Gain ListOf4**

(\EC14 CHARTS\Math\Gain ListOf4)

Settings for Math object "Gain ListOf4":

Formula: List(A,B,C,D)

**Data ListOf4**

(\EC14 CHARTS\Math\Data ListOf4)

Settings for Math object "Data ListOf4":

Formula: List(A,B,C,D)

**Containers**

(\EC14 CHARTS\Containers)

Objects in panel "Containers":

	Error String		ListOf4Avg		RestartFlag
	Ch 3 Data		SoftGains		AR_First_Flag
	Ch 2 Data		SwitchClosed		InTubeFlag
	Ch 1 Data		Serial #		TubeTimerFlag
	Ch 0 Data		A/D data list 2		FS_Previous_Count
	f2y (V3)		A/D data list		FS_Event
	f2x (V2)		RawData		FS_TimerFlag
	f1x (V1)		DataFlag		
	f1y (V0)		StopTask		

Settings for Group object "Containers":

Visible: 1

A/D data list 2 (\EC14 CHARTS\Containers\A/D data list 2)

Stores data from A/D object when running in 1XY mode to allow unerased data to be available for scaling and rotation and archiving.

The data is stored without any scaling or offset changes.

A/D data list (\EC14 CHARTS\Containers\A/D data list)

Stores data from A/D object for scaling and filtering. This object is required because data passed to the real-time strip chart cannot be accessed again for filtering, archiving etc.

The data is stored without any scaling or offset changes.

1408 DLLs (\EC14 CHARTS\1408 DLLs)

Settings for Group object "1408 containers":

Visible: 1

Count1408

(\EC14 CHARTS\1408 containers\Count1408)

This is the counter value of the one and only counter on the 1408FS

**CounterNum**

(\EC14 CHARTS\1408 containers\CounterNum)

This is the argument used to define which counter to read from. 1 is the only valid counter for the 1408FS
